

From the initial computer drawings to the finish product, Replications Unlimited worked with EEC Studios to create a variety of natural elements for a Goretex tradeshow booth.

ENORMOUS TREE

The focal point of the tradeshow design is a 20 ft. tall tree with a deeply textured bark. For shipping and setup purposes the tree was made in three sections that fit together near seamlessly. Eight shee sheets of FB 3518 were used to create this piece.

COBBLESTONE PANELS

Available in 4x 10 ft. sheets, these cobblestone panels were in several sections of the tradeshow booth.

MOUNTAIN SHOE DISPLAY

Created to appear like the face of a rocky mountain cliff, this jagged rock feature appears to be coming right from the print of the mountain behind it. This feature shows just one of many things that we can build with our rock panels.

SNOW DRIFT DISPLAYS

Carved out of eps foam these two snow drifts we created to display shoes and ski gloves for the goretex booth.
