

The Butterfly House in St. Louis, MO came to Replications Unlimited and wanted us to design two 18 inch diameter trees that were able to house several aquariums and also be able to be opened for maintenance purposes. Using our patented flexbark system we were able to offer a them a wide selection of bark textures and color combinations in order to meet their specifications. On top of this, they were interested in adding a large cactus for the display. Using our abilites in carving foam, we created this cactus out of eps foam and hard coated it for durability.
